

KAILASH BADU

Aspiring DevOps Engineer

Lalitpur, Nepal | badukailash001@gmail.com | +977 9843952547 | www.kailashbadu.com.np

PROFESSIONAL SUMMARY

Web Designer with over 2 years of professional experience at Jasper IT, actively transitioning into DevOps Engineering. Completed a structured DevOps training program and built hands-on projects covering AWS cloud infrastructure, Docker, Kubernetes, Helm, CI/CD pipelines with GitHub Actions, and GitOps with ArgoCD. Holds training certifications in DevOps, ReactJS, Git and GitHub, and AI. Eager to apply practical project experience and a strong foundation in Linux, scripting, and cloud to contribute to a DevOps or cloud engineering role.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, EKS, RDS, S3, IAM, VPC, ECR, CloudFront, CodeBuild, CodeDeploy)

Containers and Orchestration: Docker, Docker Compose, Kubernetes (K8s), Helm, Amazon EKS, HPA, PV/PVC, Ingress, ConfigMaps, Secrets

CI/CD and GitOps: GitHub Actions, Jenkins, ArgoCD, AWS CodeBuild

Infrastructure as Code: Terraform, Ansible

Programming and Scripting: Bash, Python

Linux and Networking: Ubuntu, Bash scripting, SSH, systemd, cron jobs, file permissions

Databases: MySQL, Amazon RDS, phpMyAdmin

Web Development: PHP, HTML, CSS, JavaScript, ReactJS, WordPress, WooCommerce

Version Control: Git, GitHub (branching, pull requests, workflow automation)

PROJECTS

Message Board - End-to-End DevOps Pipeline | Docker, Kubernetes, Helm, AWS EKS, ArgoCD, GitHub Actions

Personal Project

- Situation: Needed a real-world project to demonstrate end-to-end DevOps skills across containerization, orchestration, cloud infrastructure, and GitOps in a single cohesive pipeline.
- Task: Design, containerize, and deploy a 2-tier Flask and MySQL web application with a fully automated CI/CD and GitOps pipeline from local development to a live AWS production URL.
- Action: Dockerized the application using multi-stage Alpine builds to reduce image size; configured Docker Compose with Nginx reverse proxy, healthchecks, and named volumes for local development; wrote Kubernetes manifests including Deployments, Services, Secrets, ConfigMaps, PV/PVC for persistent storage, liveness and readiness probes, and Horizontal Pod Autoscaler (HPA) scaling between 2 and 5 pods based on CPU and memory; packaged all manifests into a Helm chart with templated values.yaml; provisioned AWS EKS cluster with managed node groups; configured OIDC/IRSA for secure pod-level IAM; deployed AWS Load Balancer Controller and provisioned ALB via Kubernetes Ingress; built GitHub Actions CI pipeline triggered on version tags to build and push images to DockerHub; implemented ArgoCD GitOps so CI auto-updates image tag in values.yaml and ArgoCD deploys to EKS with zero manual steps.

- Result: Achieved fully automated zero-touch deployments — a single git tag push triggers the entire pipeline from code to live production URL on AWS EKS.

S3 Static Website Hosting - Terraform Infrastructure as Code | Terraform, AWS S3, IAM

Personal Project

- Provisioned AWS S3 static website hosting entirely through Terraform, automating full infrastructure deployment from scratch with no manual console steps
- Documented the complete Terraform setup and deployment process as a reusable reference guide published on GitHub

DevOps Automation Toolkit: Python, boto3, Docker SDK, GitHub REST API, AWS

Personal Project

- Built a modular CLI health-check toolkit in Python covering EC2, S3, RDS, Docker, GitHub Actions, and log analysis, all runnable with a single `python3 main.py --all` command
- Implemented auto-discovery for AWS resources using boto3, no hardcoded IDs, queries live infrastructure on every run
- Detected real production issues on first run: 3 failed GitHub Actions workflows, an S3 misconfiguration (versioning disabled), and an 11.6% error rate across 118,000+ syslog lines
- Debugged and resolved non-trivial engineering problems: GitHub API returning 404 on untriggered workflows, Python module namespace conflicts between local folders and pip packages, and python-dotenv credential caching across module imports
- Structured as a production-style Python project with virtual environment, pinned dependencies, .gitignore, centralised config, shared reporter module, and timestamped JSON report output

OTHER SKILLS

Technical Documentation: Created structured DevOps documentation, setup guides, and CI/CD walkthroughs using Markdown, published on GitHub.

Self-Directed Learning: Independently transitioned from web design to DevOps through hands-on projects and structured learning.

Problem Solving: Resolved complex issues related to GitHub APIs, Python modules, and environment configurations.

Attention to Detail: Followed production-ready practices including dependency pinning, clean configs, and organized project structure.

EDUCATION

Bachelor of Science in Computer Science and Information Technology (BSc CSIT)

Tribhuvan University, Kathmandu, Nepal (2078 batch)

Awaiting final results

EXPERIENCE

Web Designer | Jasper IT, Lalitpur, Nepal

May 2023 - Present

- Build static websites using PHP, HTML, CSS, and JavaScript, ensuring responsive and cross-browser compatible layouts

- Handle troubleshooting and error resolution to maintain smooth, functional, and performant web applications
- Collaborate on client requirements to deliver tailored web solutions aligned with business goals

CERTIFICATIONS AND TRAINING

Training

DevOps Training Program

Broadway Infosys, Kathmandu, Nepal (13th Feb, 2026 to 28th Apr, 2026.)

- Completed a structured DevOps training program covering CI/CD pipelines, cloud infrastructure, and containerization
- Gained hands-on exposure to Jenkins, Docker, AWS services, Linux administration, and deployment automation
- Worked through real-world scenarios covering infrastructure provisioning, application deployment, and system reliability
